About the Book

The book "Economics of Bioresources: Concepts, Tools, and Experiences" provides a comprehensive overview of the economics of bioresources, from their production and utilization to their environmental impacts. It offers a

wide range of case studies and examples from around the world, making it a valuable resource for students, researchers, and policymakers alike.

The book is divided into three parts:

1. **Part I: Concepts and Theories**
2. **Part II: Tools and Methods**
3. **Part III: Experiences and Case Studies**

Part I: Concepts and Theories introduces the basic concepts and theories of bioresource economics. It covers topics such as the definition and classification of bioresources, the economics of bioresource production and utilization, and the environmental impacts of bioresource use.

Part II: Tools and Methods provides an overview of the tools and methods used to analyze the economics of bioresources. It covers topics such as economic modeling, cost-benefit analysis, and life cycle assessment.

Part III: Experiences and Case Studies presents a wide range of case studies and examples from around the world. These case studies illustrate the application of economic concepts and tools to real-world problems, such as the economics of biofuel production, the economics of forest management, and the economics of water resources.

Target Audience

The book is intended for a wide range of readers, including:

- Students of economics, environmental science, and natural resource management

- Researchers in the field of bioresource economics
- Policymakers involved in the development and implementation of bioresource policies
