

Sensory Processing Disorder: The Story

Sensory Stories

Sensory Processing Disorder (SPD) is a condition that affects how the brain processes sensory information. This can lead to a variety of challenges, including difficulty with social interaction, learning, and behavior.

Sensory Stories are a type of story that can help children with SPD learn how to better understand and cope with their sensory experiences. These stories are typically written in a simple and easy-to-understand language, and they often include sensory details that can help children to identify and understand their own sensory needs.
