Dr. Smith argues that the first hominids were social animals who lived in small groups and relied on hunting and gathering for sustenance. Over time, these groups began to develop more complex social structures, including division of labor, leadership, and religious beliefs.

The development of language was a major turning point in human history. It allowed for the sharing of information and ideas, which in turn led to the development of new technologies and social institutions. Agriculture was

another major turning point, as it allowed for the production of surplus food, which in turn led to the rise of cities and civilization.

Dr. Smith's book is a comprehensive and authoritative account of the origins of human society and economy. It is essential reading for anyone interested in this fascinating period in our history.

## **Key Features**
