

Unlocking the World of Repetitive and Restricted Behaviors in Autism Spectrum Disorders: A Comprehensive Guide to Understanding and Intervention

Repetitive and restricted behaviors (RRBs) are a core feature of autism spectrum disorders (ASDs). These behaviors can include a wide range of activities, such as hand flapping, rocking back and forth, and lining up objects. RRBs can be disruptive, embarrassing, and even dangerous, and they can significantly interfere with a person's ability to learn, work, and socialize.

In recent years, there has been growing interest in understanding and intervening in RRBs. This interest has been driven in part by the increasing prevalence of ASDs, as well as by the growing recognition that RRBs can have a significant impact on the quality of life for individuals with ASDs and their families.

Repetitive and Restricted Behaviors and Interests in Autism Spectrum Disorders: From Neurobiology to Behavior (Autism and Child Psychopathology Series)
